

### Your Data – Just the Way You Need It

MavBridge™ provides a wide variety of Data Enrichment Modules (DEMs) to format your images and data exactly the way you need. Each module is a building block—use them individually, or combine them together to form a powerful, customizable solution.

#### IMAGE ENHANCEMENT AND QUALITY

<b>Image Cleanup</b>	Despeckle images to improve readability and reduce file size.
<b>Image Crop</b>	Extract just the critical area of a larger document.
<b>Image Resample</b>	Easily change the resolution of scanned images. Down-sample to reduce file size, or up-sample for compatibility with downstream systems.
<b>Image Quality</b>	Continuously monitor the quality of your scanned images. If quality degrades, operators and supervisors are alerted immediately.

#### TRANSACTION CLEANUP

<b>Automatic Rotation</b>	Scan intermixed portrait and landscape documents and let MavBridge rotate them automatically.
<b>Page Reorder</b>	Scan transactions in any order and allow MavBridge to order them properly.
<b>Batch Filter</b>	Easily remove unneeded pages or images from your batches. Reduce storage space and ensure that downstream systems receive only what they need.
<b>Blank Page Detect</b>	Automatically remove blank images. Reduce storage space and eliminate operator review of empty pages.

#### DATA CAPTURE AND INDEXING

<b>Barcode Reader</b>	Find and read 1D or 2D barcodes from any or all locations on your documents.
<b>OCR Reader</b>	Single or Multi-font OCR engines allow you to extract printed data.
<b>Mark Sense</b>	Read checkboxes or look for writing, such as address changes.

#### CUSTOM BUSINESS LOGIC

<b>MavScript™</b>	Powerful, flexible scripting language allows complex actions to be performed automatically. Get custom logic without the aggravation of custom software installation.
<b>Data Map</b>	Create a simple “lookup table” to easily map your data to the proper values.

#### TRACKING AND REPORTING

<b>Electronic Audit Trail</b>	Apply vital tracking information to any position or orientation on your images.
<b>Batch Reporting</b>	Create customizable end-of-batch reports, in PDF or TIFF formats.
<b>Email Notification</b>	Receive email alerts for every batch or upon user-specified conditions.

Each of the above modules runs automatically, requiring no user intervention. When combined together with Mavro Imaging’s Document Classification and Indexing Suite, sites can achieve powerful, end-to-end solutions.
