Optimize Document Scanning with

ONE-TOUCH PROCESSING

Is your document processing operation riddled with extraneous steps? Is productivity put on-hold for paper to be manually sorted, prepped and passed around?

Mavro Imaging's One-Touch Processing:

Eliminate Extra Steps

Faster Processing Times

Reduce Labor Costs up to 65%

Simply Open and Scan

Documents, payments, forms and more don't need to be sorted and prepped. The intermixed stream of items gets touched only once, eliminating manual steps to save time and labor.

MavBridge™ Optimizes Your Workflow

MavBridge software automates the recognition and routing of document images based on your business rules and defined workflow for improved access, auditability and actioning.

Distribute Capture for Resource Availability

Since operators no longer need to be knowledgeable about sorting criteria, scanning activity can be standardized among different departments, even when different business rules apply.

Gain Accuracy, Efficiency and Control

One-Touch Processing simplifies document and data capture to scan more images faster. Avoiding the physical movement of paper cancels out costly inherent issues and makes remote scanning a reality.

Streamline Operations and Customer Service

MavBridge integrates inputs from scanners, email and electronic sources via a single platform for faster remittance processing, new account opening and better customer service.

Strengthen Data Security

By touching sensitive documents only once, physical exposure and risk of loss is significantly minimized. This delivers the highest level of security so privacy is protected and compliance is satisfied.

EFFICIENCY IS AS EASY AS ONE-TOUCH PROCESSING.
